

An abstract background graphic consisting of numerous thin, wavy lines in shades of blue and red, creating a sense of movement and complexity. These lines are interspersed with small, scattered dots of the same colors, giving the impression of a data visualization or a network map.

Service Providers Ecosystem in Automotive Report

An Analysis by Draup

Conceptualized and Developed: December-
2021

The objective of the document is to provide an overview of the
Service providers ecosystem in Automotive around the globe

AGENDA	
01	Market Overview
02	Service Provider Capability Analysis
03	Globalization Technology Footprint
04	Vendor Engagements
05	Service Providers Deepdive
06	Service Providers Capability Comparison and Overview
07	Key Focus and Opportunity Areas

Automotive ER&D Overview: The automotive players are keen in enabling E-mobility and focused on investing in development of autonomous vehicles to meet the demand across the market

Automotive ER&D Spend (USD Bn)

- E-mobility has emerged as the main feature of investment according to the 2021 R&D survey results, namely around battery technology and management systems, e-motors, and power electronics
- Vehicle manufacturers are seeing regulatory challenges that are influencing business and pushing electrification
- Car companies have an ambitious plan to deliver BEVs that have to comply with all upcoming regulations from Europe, Greater China, North America, and other regions
- Many car manufactures are looking forward to developing autonomous vehicles to meet customer demand and reduce human interventions in complex traffic situations

Factors Affecting Automotive ER&D Market

Robotic Process Automation

The enhanced Artificial Intelligence in the assembly lines has streamlined vehicle production, making the manufacturing process more productive, efficient, and cost-effective.

Covid-19 Impact

The Covid-19 pandemic has caused disruptions in the export of parts, large-scale manufacturing interruptions, and the closure of assembly plants across the globe.

Low Preference for Diesel Cars

Air quality concerns and taxation changes have led to a significant decrease in diesel vehicle sales, contributing significantly to the fall of new car registrations worldwide.

Electrification

Expanding the use of Electric Vehicles across the various countries to achieve carbon neutrality and enhancing the e mobility solutions for the customers to drive towards electrification

Feature Enhancements

OEMs are focusing on introducing and enhancing vehicle features driven by greater demand for safety & security and the need for seamless connectivity.

Autonomous Cars

Evolving customer preferences has led to a shift in the R&D priorities of carmakers with an enhanced focus on the software layer to enable autonomous and ADAS capabilities.
